

BD OS – Integrated View

BD Operating System Layer	Primary Tools & Frameworks	Consultant Behavior at This Stage	Outputs / Value Created
1. Orientation	- BD Guiding Principles - Consultant Mindset (not sales, not marketing) - Role clarity (BD as system capability)	Align before acting - Establish trust, intent, and boundaries - Clarify “how we work” before “what we do” - Set expectations around uncertainty and iteration	- Shared expectations - Credibility and trust - Clear understanding of BD’s role as a partner, not a vendor
2. Analysis	- Market & referral data - Market intelligence (qual + quant) - Specialty capability & capacity assessment - Boise-style opportunity assessments	Diagnose before proposing - Ask better questions than others - Resist solutioning too early - Name what is known, unknown, and assumed	- Informed but incomplete market map - Clarity on constraints, risks, and unknowns - Better framing of the real problem

3. Planning	- Outreach Coaching Framework - Targeting & prioritization logic - Hypothesis-based outreach planning - Capacity-aware planning	- Co-design hypotheses, not answers - Explore options without committing outcomes - Align outreach to current-state reality - Plan for learning, not just execution	- Prioritized outreach hypotheses - Clear rationale for where & why to engage - Agreed-upon criteria for success
4. Execution	- Crafting a Compelling Message - Provider-to-provider meetings - Education events, lunches, site visits - Relationship management	- Explore without promising - Represent the program accurately - Set expectations honestly - Listen more than pitch - Gather real-world feedback	- Real market signal (interest, friction, confusion) - Strengthened relationships - Trust preserved even under capacity constraints
5. Synthesis	- AI tools (Meeting Notes Assistant, Initiative Agent) - Pattern recognition across visits - Thematic analysis	- Translate activity into meaning - Look across interactions, not just at them - Identify patterns, not anecdotes - Separate signal from noise	- Themes and insights - Early indicators of opportunity or risk - Strategic learning, not just activity logs

6. Reporting	- Initiative reports - Market & topic briefs - Dashboards & summaries - Executive-ready narratives	Clarify reality for decision-makers - Synthesize, don't dump data - Make uncertainty visible and usable - Communicate what's known, emerging, and blocked	- Shared understanding - Confidence in next steps - Reduced rework and misalignment
7. Outcomes	- Leadership decisions - Strategy shifts - Resource allocation - Go / No-Go determinations	Enable better system decisions - Support choices, not ownership of outcomes - Close the loop with stakeholders - Prepare the system for what's next	- Better strategic decisions - Protected pipelines - Sustainable growth aligned with capacity

Why this table is powerful

- It **connects mindset → tools → behavior → value** in one view
- It makes clear that **not every stage is about growth**
- It legitimizes *assessment, uncertainty, and constraint-aware work*
- It gives PRCs language for **what they're doing and why it matters**
- It aligns perfectly with the Boise pulmonary assessment, Structural Heart work, and Stacie's evolution
