

A FRAMEWORK FOR BUSINESS DEVELOPMENT

The BD Operating System

*How we turn relationships into intelligence, intelligence into strategy,
and strategy into measurable system impact.*

UNIVERSITY OF UTAH HEALTH

Office of Network Development & Telehealth

— THE SOLUTION

An operating system, not a toolkit

BD-OS is a designed system architecture that turns scattered activity into strategic capability.

01

Transforms market intelligence

Raw data, referral signals, and field observations become structured, strategic insight.

02

Connects activity to outcomes

Every conversation, visit, and report has a traceable place in the chain of system decisions.

03

Positions BD as a capability

Not a function that runs errands — a system-level capability that makes the organization smarter.

THE SEVEN QUESTIONS THE SYSTEM ANSWERS

1

What guides us?

2

What do we know?

3

Where do we focus?

4

How do we engage?

5

What patterns emerge?

6

What do leaders need?

7

What changed?

The BD Operating System

Seven stages that build on each other, feed each other, and close the loop.

ORIENTATION	<i>What guides us?</i>	<i>Align before acting</i>
ANALYSIS	<i>What do we know?</i>	<i>Understand the market</i>
PLANNING	<i>Where do we focus?</i>	<i>Co-design hypotheses</i>
EXECUTION	<i>How do we engage?</i>	<i>Test through engagement</i>
SYNTHESIS	<i>How do we organize?</i>	<i>Translate into meaning</i>
REPORTING	<i>How do we communicate?</i>	<i>Clarify for decisions</i>
OUTCOMES	<i>What changed?</i>	<i>Close the loop</i>

↻ OUTCOMES FEED BACK INTO ANALYSIS — THE SYSTEM LEARNS ABOUT ITSELF

01

STAGE 1 OF 7

Orientation

ALIGN · *How do we think and operate?*

PURPOSE

Define how BD thinks, behaves, and creates value before any tactic, visit, or report. This stage doesn't do the work — it orients the work.

INCLUDES

- Guiding Principles
- BD Toolkit
- Consulting mindset (not sales, not marketing)
- Market intelligence posture
- Data discipline
- Messaging & coaching frameworks
- Specialists directories
- Network of relationships

TOOLS

Guiding Principles document
Role clarity framework
Outreach Coaching Framework
Crafting a Compelling Message

KEY MESSAGE

Align before acting. Establish trust, intent, and boundaries before “what we do.”

02

STAGE 2 OF 7

Analysis

UNDERSTAND · *What do we know?*

PURPOSE

Turn experience into insight. Build the most accurate, grounded understanding of the market before proposing action. The output is an incomplete but informed map of reality.

INCLUDES

- Market intelligence (quant + qual)
- System knowledge
- ONDT tools & data
- Specialty capability & capacity assessment
- Referral and transfer friction points
- Opportunity identification
- Boise-style opportunity assessments

TOOLS

Smartsheet Reports
External Provider Database
Tableau Dashboards
Outreach Plans

KEY MESSAGE

If it's not understood, it can't be planned. Diagnose before proposing.

03

STAGE 3 OF 7

Planning

CO-DESIGN · *What are we going to do, and why?*

PURPOSE

Translate BD's understanding into hypotheses — refined with clinical and operational expertise. The output commits to informed exploration, not predetermined outcomes.

INCLUDES

- Outreach plans and initiatives
- Target markets, hospitals, clinics, providers
- Patient journey and referral pathways
- Right-fit acuity analysis
- Message co-authorship with providers and leaders
- Outreach coaching best practices
- Capacity-aware planning

TOOLS

Outreach Plan Targets
Connection Databases
Specialists Directories
Hypothesis framework

KEY MESSAGE

Plan for learning, not just execution. Co-design hypotheses, not answers.

04

STAGE 4 OF 7

Execution

ENGAGE · *What actually happened, and what did we learn?*

PURPOSE

Test hypotheses through disciplined, value-driven engagement. The output is raw truth — stories, signals, friction, momentum — captured honestly enough to inform the system.

INCLUDES

- Purposeful connections (never “just checking in”)
- Clear articulation of co-authored message
- Market-specific conversations
- Honest assessment of partner capabilities
- Thorough documentation of wins, issues, opportunities
- Flexibility to explore adjacent targets
- Guardrails: explore, don't decide · listen, don't promise · document, don't conclude

TOOLS

Meeting Notes Assistant
Outreach Plan Targets
Connection Databases
Highlights

KEY MESSAGE

If it's not documented well, it didn't happen — and it can't inform the system.

05

STAGE 5 OF 7

Synthesis

TRANSLATE · *What patterns are emerging?*

PURPOSE

Turn raw activity into structured insight. Synthesis organizes, distills, and finds patterns — looking across interactions, not just at them.

INCLUDES

- Pattern recognition across visits
- Thematic analysis
- Highlight extraction
- Story clarification
- Early indicators of opportunity or risk
- Separating signal from noise

TOOLS

AI: Initiative Reporting Agent
AI: Topic Reporting Agents
AI: Market Reports
Meeting Notes Assistant
Smartsheet Reports

KEY MESSAGE

AI doesn't create insight. It reveals what we captured. Poor inputs, poor outputs.

06

STAGE 6 OF 7

Reporting

COMMUNICATE · *How and what do we communicate?*

PURPOSE

Put the right insight in front of the right audience so clarity rises to the surface. Synthesize — don't dump data. Make uncertainty visible and usable.

INCLUDES

- Monthly BD Reports
- Topic Reports
- Market Reports
- Initiative Reports
- Highlights Reports
- Executive dashboards
- Ad-hoc system requests

TOOLS

AI: Initiative Reporting Agents
AI: Topic Reporting Agents
AI: Market Reports
Smartsheet Reports
Tableau Reports

KEY MESSAGE

Enable the system to define the problem more accurately, ask better questions, and develop better solutions.

07

STAGE 7 OF 7

Outcomes

IMPACT · *What changed because of our work?*

PURPOSE

When BD-OS is working, leaders make fewer decisions based on assumptions and more decisions grounded in real market behavior. Outcomes feed back into Analysis for the next iteration.

INCLUDES

- Market growth and market preservation
- Leaders engage BD as a system resource
- Assumptions replaced with evidence
- Improved system strategy
- Partnerships deepen internally and externally
- Improved composition of high-acuity patients
- Optimized referral and transfer pathways

TOOLS

Leadership decisions
Strategy shifts
Resource allocation
Go / No-Go determinations
Protected and grown pipelines

KEY MESSAGE

The loop closes. Outcomes re-inform analysis. The system gets smarter about itself.

THE FEEDBACK LOOP

How the pieces fit together

No step is optional. Each feeds the next, and the last feeds the first.

THE PROBLEM IT SOLVES

Teams see individual tools. They don't see where those tools sit in the chain or what their work feeds next.

WHAT CHANGES

No step is optional anymore. It's structural. Behavior tells us whether our work actually mattered.

Mindset → Tools → Behavior → Value

The whole system in one view: what each stage demands of us, and what it produces.

STAGE	PRIMARY TOOLS & FRAMEWORKS	BEHAVIOR AT THIS STAGE	OUTPUTS & VALUE CREATED
1. Orientation	Guiding Principles · Consulting mindset · Role clarity (BD as system capability)	Align before acting · Establish trust, intent, boundaries · Set expectations around uncertainty	Shared expectations · Credibility and trust · BD understood as partner, not vendor
2. Analysis	Market & referral data · Quant + qual intelligence · Specialty capability/capacity · Boise-style assessments	Diagnose before proposing · Ask better questions · Resist solutioning early · Name what's known, unknown, assumed	Informed but incomplete market map · Clarity on constraints and risks · Better framing of the real problem
3. Planning	Outreach Coaching Framework · Targeting logic · Hypothesis-based planning · Capacity-aware planning	Co-design hypotheses, not answers · Explore options without committing outcomes · Plan for learning	Prioritized outreach hypotheses · Clear rationale for where and why to engage · Agreed success criteria
4. Execution	Crafting a Compelling Message · Provider-to-provider meetings · Education events · Site visits	Explore without promising · Represent the program accurately · Listen more than pitch · Gather real feedback	Real market signal (interest, friction, confusion) · Strengthened relationships · Trust preserved
5. Synthesis	Meeting Notes Assistant · Initiative Agent · Pattern recognition · Thematic analysis	Translate activity into meaning · Look across interactions, not just at them · Separate signal from noise	Themes and insights · Early indicators of opportunity or risk · Strategic learning, not activity logs
6. Reporting	Initiative reports · Market & topic briefs · Dashboards · Executive-ready narratives	Clarify reality for decision-makers · Synthesize, don't dump data · Make uncertainty visible and usable	Shared understanding · Confidence in next steps · Reduced rework and misalignment
7. Outcomes	Leadership decisions · Strategy shifts · Resource allocation · Go / No-Go determinations	Enable better system decisions · Support choices, not ownership of outcomes · Close the loop with stakeholders	Better strategic decisions · Protected pipelines · Sustainable growth aligned with capacity

What BD actually does

***“ We turn relationships into intelligence,
intelligence into strategy,
strategy into action,
and action into measurable system impact.***

HOW BD SHOWS UP IN THE OPERATING SYSTEM

Eyes and ears of the system

→ *Analysis + Execution*

Bridge internal and external

→ *Execution + Reporting*

Identify strategic growth opportunities

→ *Planning + Synthesis + Outcomes*

BD is how the system listens at scale.

We are guides, not oracles

An incomplete map, honestly drawn, beats a confident map that's wrong.

No one sees the full system.

Every role in the health system has a partial view. BD's job is to widen the view, not to claim the whole of it.

Data is not understanding.

Numbers describe what happened. Relationships reveal why. Both are required — neither is sufficient.

Relationships reveal what dashboards can't.

The signal that matters most often comes from the conversation that didn't make it into the spreadsheet.

TWO THINGS A GUIDE SAYS

“Not having the answer yet is not a failure — it's part of the work.”

“This is our analysis — not a statement of fact.”

Permission to explore is the most expert thing we can offer a complex system.

If this system is working, then...

- **No meeting** is unprepared.
- **No insight** is undocumented.
- **No report** is wasted.
- **No relationship** is transactional.
- **No decision** is made uninformed.

This is what “the system is working” actually means.

If you walk out with three things...

01

Your work is part of a system.

Nothing you do is a one-off. Every connection, report, and follow-up is an input to the next decision the system has to make.

02

Credibility comes from preparation.

From thorough execution, honest documentation, and reliable follow-through — not from having all the answers.

03

Your role is to help the system see reality clearly.

And to be the vehicle for implementing the change that follows. We are how the organization listens at scale.

BD is how the system listens at scale.

Questions?

Reflections, pushback, and “what about...” are all welcome.
